

Cookie Notice

This is the Cookie Notice for the National Child Mortality Database (“NCMD”), a product created and owned by Health Quality Improvement Partnership, issued in accordance with the General Data Protection Regulation (GDPR).

Cookies are small text files placed on your device when you visit internet sites. Cookies can be used for things such as allowing a website to remember you, to store and honour your preferences and settings, or enabling you to sign in where relevant. Websites may use cookies for detecting what kind of device you have in order to present content in the best way, for a language switch and/or for other purposes. Cookies do not collect or store any personally identifiable information.

NCMD does not use cookies, instead it uses a Token-Authentication model that utilises Local Storage in its place, however local storage still needs to store data on your device so we treat them the same as Cookies;

1. Local Storage – We use this to cache some of the HTML pages to improve the speed of your system and to record the session token that enables the user to authenticate with NCMD.

Token-based authentication is stateless. The server does not keep a record of which users are logged in or which JWTs have been issued. Instead, every request to the server is accompanied by a token, which we store in Local Storage and then the server uses this to verify the authenticity of the request.

You can use the controls in your internet browser to control the data collected by Local/Web storage and Cookies, for example by limiting how the websites you visit are able to use Local Storage or Cookies, or to withdraw your Cookie consent (which also removes for Local Storage) by clearing or blocking cookies.

You can refuse the use of cookies by selecting the appropriate settings in your browser. However, if you do this you will not be able to login to the application and may lose some useful functionality such as personalisation.
